

transplant them into larger containers. The seeds can also be directly planted in the garden and the tree grows in a range of soil types, but prefers moist, rich bottomland soils. This species can become a weed as it tends to inhabit unkempt shrub borders, hedges, fence-rows, and other open ground. It is susceptible to Dutch elm disease, but to the degree of American elm.

**Propagation by cuttings** stake cuttings in early summer and root with IBA treatment.

**Cultivars, Improved and Selected Materials (and area of origin)**

This species is somewhat available through native plant nurseries within its range.
